WDF PRACTICAL – 2

1. Problem Definition

Develop static HTML5 skeletons for the StudentHub student portal using semantic HTML5 elements and an accessibility-ready structure. The practical implements seven connected pages: Login, Register, Home, Profile, Events, Feedback, and Contact Us.

Login is the entry page. A new user can move to Register, return to Login after registration, and then continue to Home. Portal pages use a consistent header, navigation, main content, and footer.

2. Key Questions / Analysis / Interpretation

Q1. Are semantic tags such as header, nav, main, section, article, aside, and footer used properly?

Yes. Semantic tags describe the purpose of webpage regions. <header> contains portal identity, <nav> contains navigation, <main> contains unique page content, <section> groups related content, <article> represents individual content items such as events, <aside> can contain supplementary information, and <footer> contains footer information.

Q2. Are form labels, headings, image alt text, and navigation links accessible?

Yes. Form controls use explicit labels, headings provide a logical hierarchy, images use descriptive alt text, and navigation links use meaningful names. Required fields and suitable HTML input types are also used.

Q3. Is the page structure consistent across all pages?

Yes. Authenticated portal pages follow the same general structure: header, navigation, main content, and footer. Login and Register remain simple entry/authentication pages.

3. Key Skills Addressed

- HTML5 semantic elements
- Accessibility basics
- Form labels and input types
- Page linking and navigation
- Content hierarchy
- Consistent page structure

4. Applications

Static website foundations and accessible UI design.

5. Learning Outcome

Students will be able to create clean, linked, semantic, and accessibility-ready HTML5 page structures.

6. Tools / Technology Used

VS Code, HTML5, and a web browser.

7. Source Code

The following is the static HTML5 source used for the StudentHub practical. No CSS or JavaScript is required.

login.html

```
<!DOCTYPE html>

8. Accessibility Checklist

- Semantic elements such as header, nav, main, section, article and footer are used.
- Form fields have explicit labels connected through for/id attributes.
- Headings follow a logical hierarchy.
- Images include descriptive alt text.
- Navigation links use clear and meaningful names.
- Navigation landmarks use aria-label where useful.
- Required fields use the required attribute.
- Appropriate input types such as email and password are used.
- The general structure remains consistent across portal pages.

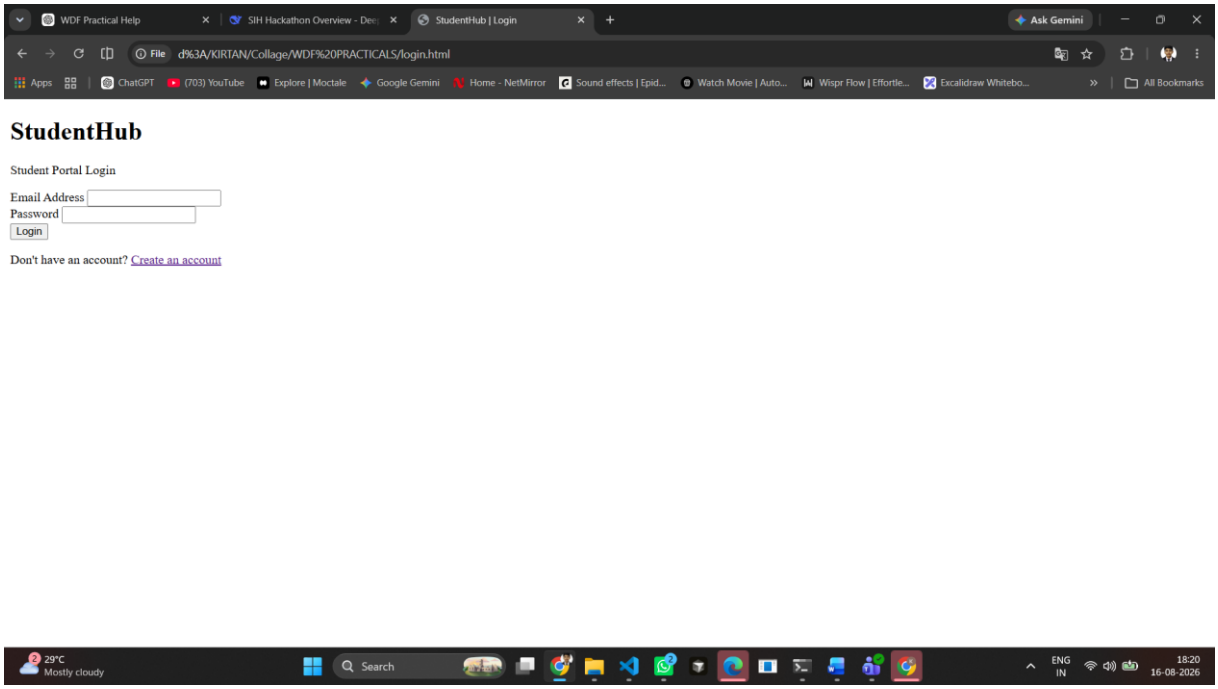

9. Page Linking / Navigation Flow

Login → Register → Login → Home → Profile / Events / Feedback / Contact Us. The portal navigation connects the main pages, while Logout returns to Login.

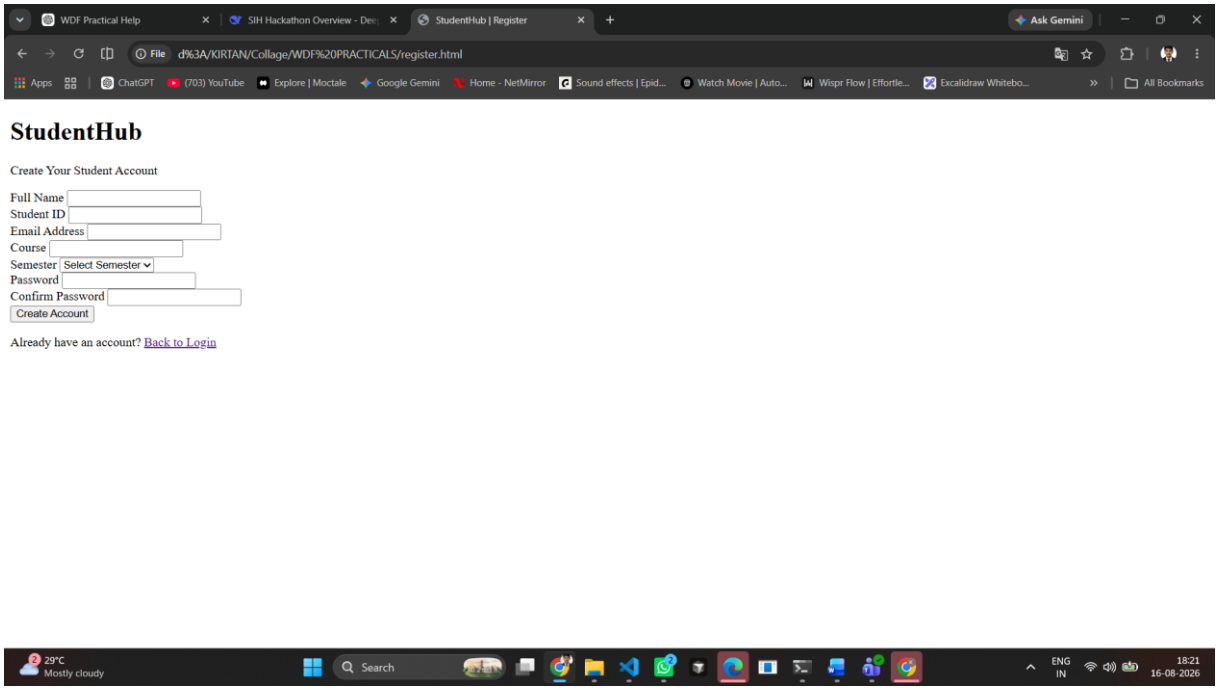

10. Static Page Screenshots

Insert the browser screenshots of the seven implemented pages below. These are the same pages used for the practical demonstration.

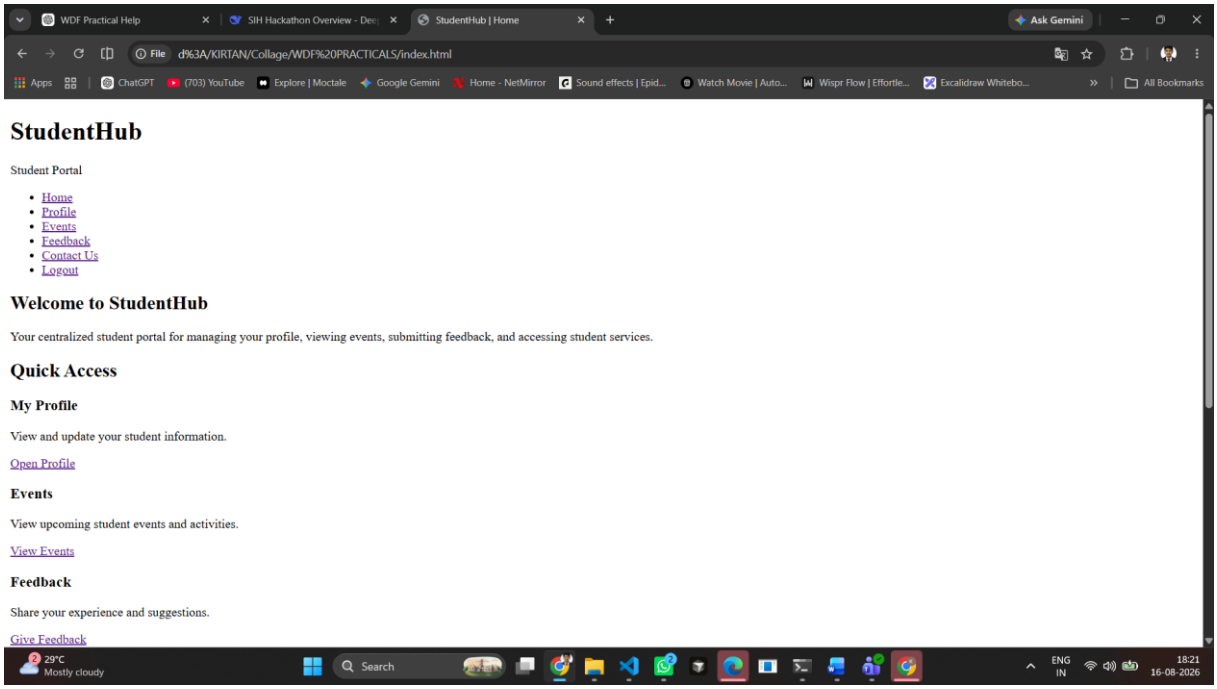

LOGIN

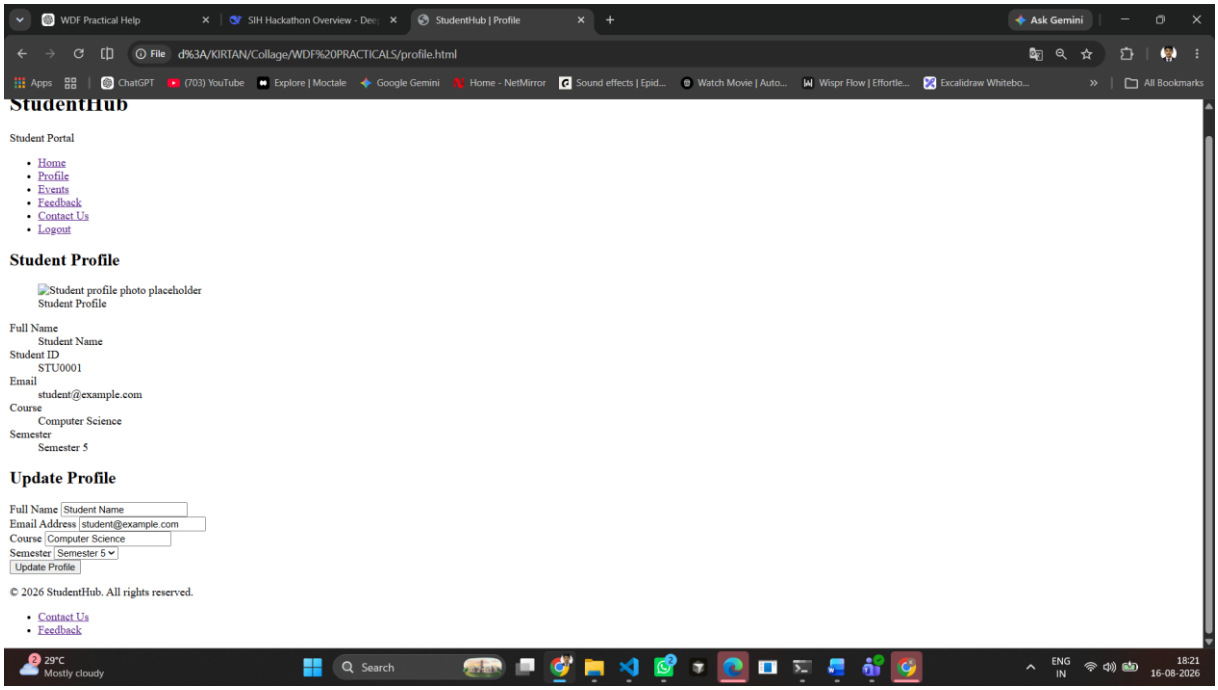

REGISTER

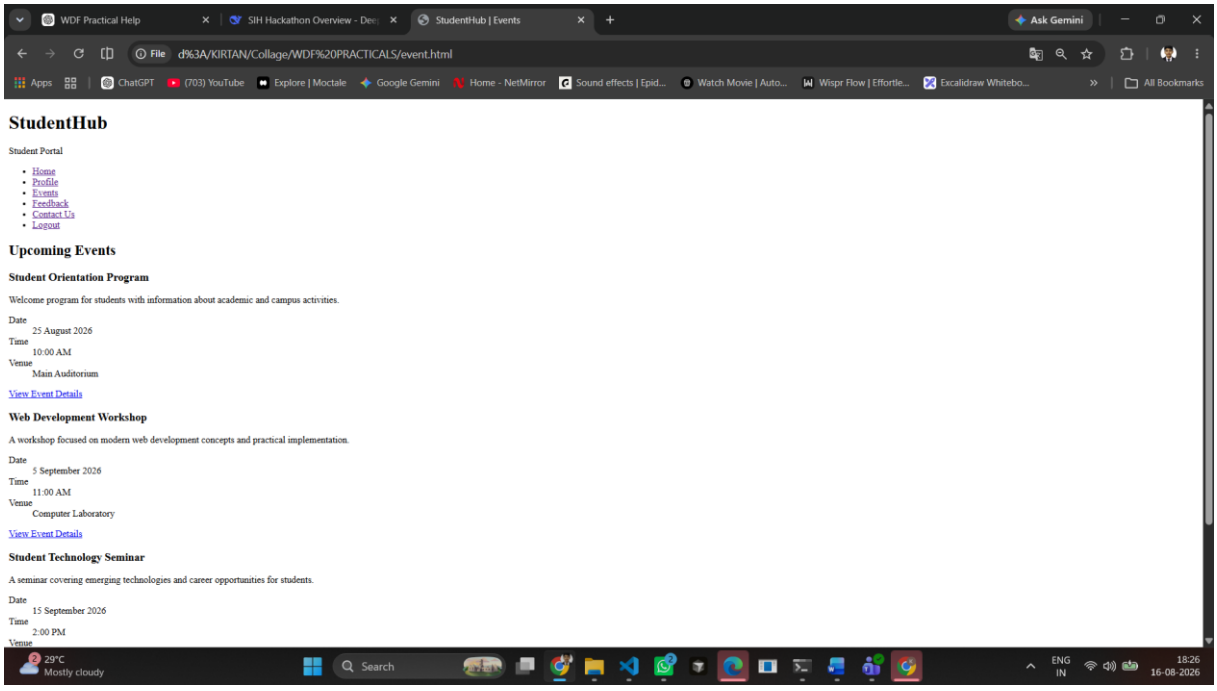

HOME

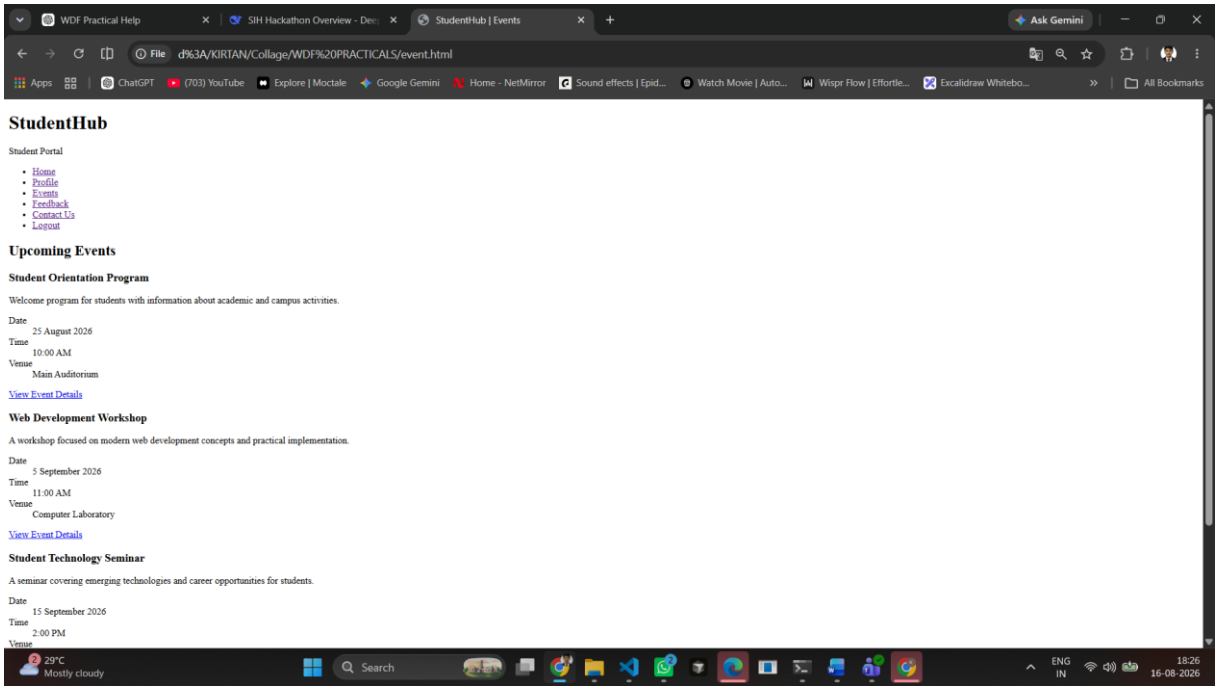

PROFILE

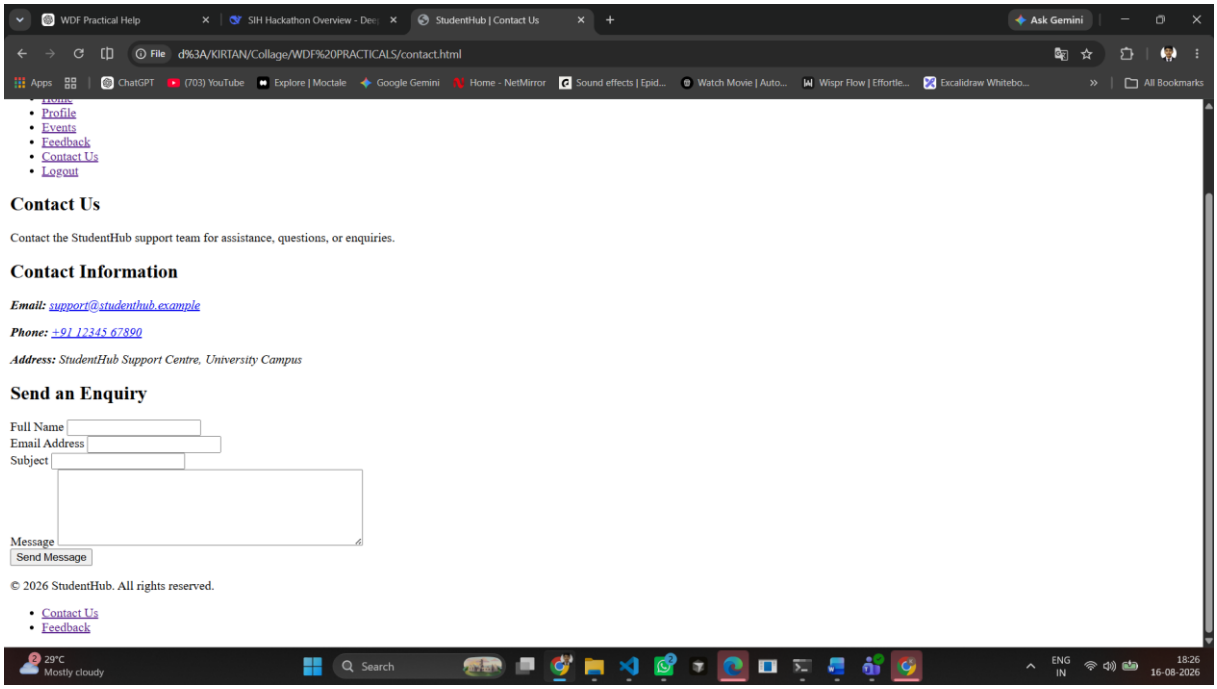

EVENTS

FEEDBACK

CONTACT US

11. Conclusion

The StudentHub static pages were developed using HTML5 semantic elements, accessible form structures, meaningful navigation links, and a consistent page hierarchy. The seven pages are connected and provide the required static website foundation.
